

MY HARVEST HUB PLATFORM BUG & FEATURE IMPROVEMENT REPORT – (22-10-2025)

1. Vendor Category Issue

Description: New vendors unable to categorize their store or brand during registration or profile setup. The platform currently provides product and service categories, but there is no dedicated field or option for a vendor's brand type.

Expected: Vendors should be able to select or create a suitable category that best represents their brand or business type during onboarding.

Impact: Vendors' stores appear uncategorized, reducing proper sorting, filtering, and discoverability on the platform.

2. WhatsApp Number Automation

Description: When vendors add their WhatsApp contact during profile setup, they are required to manually input the full number including the country code (+234).

Expected: The system should automatically prefill the Nigerian country code "+234" before the input field, so vendors only need to enter the remaining digits of their number.

Impact: Improves user experience, prevents formatting errors, and ensures contact consistency across all vendor profiles.

3. Delayed Password Reset Email

Description: When a vendor requests a password reset, the reset link sent to their email is delayed. Vendors experience a long waiting period (several minutes) before receiving the reset email.

Expected: The password reset link should be delivered promptly (within Seconds) after the request is made.

Impact: Causes frustration and delays in account recovery for vendors, potentially discouraging platform use.

4. Campus/Location Selection Update

Description: During new vendor registration, there is currently an option for vendors to indicate their campus location (e.g., the church campus they attend). However, the selection is limited and does not account for vendors who are outside Lagos.

Expected: The system should allow vendors to:

- a. Select the campus closest to them from a dropdown list.

- b. Indicate whether they are based within Lagos or outside Lagos.

Impact: Improves location accuracy, helps better organize vendors by region, and enhances logistics or vendor sorting.

5. Pickup or Delivery Option for Customers

Description: Currently, users can select delivery dates and time frames, but there is no option to indicate whether they prefer to pick up their orders.

Expected: Customers should be able to choose between:

- a. Pickup in church (with options like “Midweek Service or “Sunday Service”)
- b. Home Delivery (doorstep at the address provided)

Impact: Enhances delivery flexibility and convenience, reduces confusion on logistics, and supports organized distribution during services or events.
